

EvoCoating STONE PROTECTION

MADE IN GERMANY

► The Company

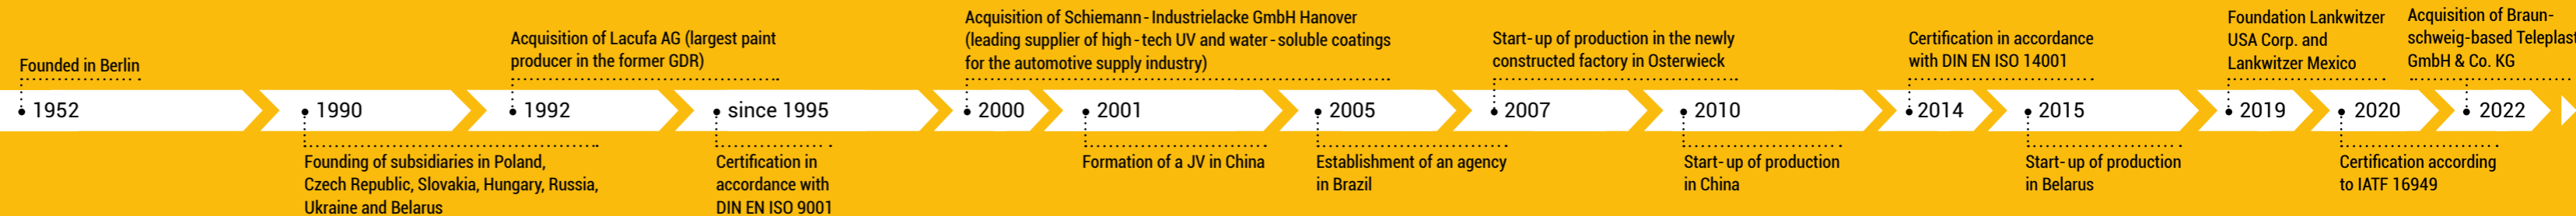

WORLDWIDE ACCLAIM, MADE IN GERMANY

Founded in 1952, LANKWITZER has established itself worldwide as a premium supplier of industrial coating systems. Lankwitzer's trademarks are top-class quality „Made in Germany“, a high degree of flexibility, outstanding innovative strength and a customer-driven mindset. The key to our success is the global availability of all our products and ongoing customer support provided by a highly-qualified team of developers and technicians.

Our selected product range has been used for decades in the production coating of concrete blocks and has proven outstandingly successful in many projects. Building on our many years of experience, we guarantee you customized solutions for finishing your products, even where projects are complex. Our personal key account managers and experienced application engineers are by your side from project idea to smooth production coating.

Guidance during coating processes, sophisticated logistics and just-in-time deliveries, not to mention continuous laboratory developments and technical testing, complement the worldwide service we provide for our customers.

WE RISE TO YOUR CHALLENGE

Unprotected concrete slabs and pavers quickly lose their colour intensity without our surface protection. Environmental influences, such as leaves and moss, or household products, such as coffee and wine, or other deposits cause permanent soiling. Conventional impregnations demonstrate only a limited protective function which wears off after a fairly short time.

After several years of intensive research, we have developed a sustainable surface protection system based on UV and hydro coatings for the production coating of concrete floor coverings.

Since 2001, our high-performance systems have been used for coating concrete products in batch production. These surfaces are exposed to extreme stresses in continuous use. Even when used in pedestrian zones or on roads, the finished surfaces impress with optimum results.

Customer requirements regarding gloss level, abrasion resistance, colouring, slip and skid resistance (SRT values > 45 on blasted surfaces) can be individually adjusted and implemented with our coating systems.

Paving stones

Driveways, public paths and squares are exposed to huge stresses. The challenge here is to make them particularly attractive and easy to maintain at the same time. Our coating systems allow you to create elegant surfaces that attract admiring glances. At the same time, the high-quality surfaces reliably prevent the build-up of dirt and moss. This ensures long-term value retention.

Patio slabs

Factory coating creates easy-to-clean surfaces and even difficult stains can readily be removed. This prevents unsightly soiling as well as algae and moss. Even after years, the surfaces still look as smart as on the first day. Digital printing combined with our protective coatings can create individual decorative effects and designs for high-quality, durable concrete slabs.

OUR PORTFOLIO IS IMPRESSIVE

Thanks to our wide range, you can generate high-quality protective coatings and functional surfaces on your concrete blocks. Digital printing can additionally be used to provide the surfaces with the desired decorative effect.

Our product range includes:

- Solvent-free and UV-curing high-performance clear lacquers
- Water-thinnable dispersion systems

Design concrete blocks according to your wishes and requirements with our products.

PROFESSIONAL 1K Hydrocoating

Protective coatings with or without a functional surface are produced by using mainly two-coat aqueous dispersion systems. Sprayable colour effects, such as clouds, or 3D-effects are also possible.

PREMIUM PLUS 100 % UV Coating and Digital Printing

Digital printing is used to finish the concrete block surfaces with the desired decorative effect. Our solvent-free and UV-curable clear lacquers ensure a safe and long-lasting seal for the digital printing. Functional surfaces can also be implemented here according to requirements.

PREMIUM 100 % UV Coating

High-quality protective coatings are generated with solvent-free and UV-curing clear lacquers. Functional surfaces and sprayable colour- or 3D-effects can be implemented as required.

OUR PILOT PLANT – YOUR ADVANTAGE

Thanks to our own automated continuous line, we have the ability to test and optimize our coatings on concrete blocks under production conditions. We can therefore carry out the highest level of development work and quality control in our technical centre according to your requirements.

Together with our experienced technicians, this creates the perfect conditions for fast and successful implementation of your projects.

In our technical centre, our experts can optimally adjust the complex parameters that are essential for high-quality, durable surface protection.

- Concrete block (density and hydrophobization of core and facing concrete)
- Coating systems
- Coating application

We have a large number of locations worldwide that stand out due to their infrastructure and the high technical standard of our service and sales teams. Direct networking between the employees of all our subsidiaries drives forward our developments and ensures fast order processing. Our company's success is built on these firm foundations.
